

1.Explore new tool and programming language combinations in the HTML application shared by Sudarshan. For example, such as Playwright with JavaScript, Playwright with TypeScript, Selenium with Java, etc. After exploring the combinations, generate the corresponding JSONL file.

Selenium+Java:

The screenshot shows the 'JSONL Training Data Converter for Fine tuning LLM' application. The interface is divided into two main sections: 'INPUT' and 'OUTPUT'.

INPUT Section:

- 1. SELECT FRAMEWORK & LANGUAGE:** This section allows users to choose a framework and language. The 'Selenium' framework is selected, and 'Java' is chosen as the language. Other options include C#, Python, and Playwright with Java, TypeScript, and C#.
- 2. PROMPT CONFIGURATION:** Currently set to 'DEFAULT'.
- 3. ADD TRAINING DATA:** This section includes a 'Batch Upload' button and a text box for uploading .TXT files. A note states: 'Files need `<code>HTML</code> at minimum. If the framework code marker/section is missing, code is auto-generated from the HTML using the currently selected framework's template. Turn on Auto-download batch in the Downloads tab if you also want the full JSONL saved automatically after processing.'`

OUTPUT Section:

- 4. Output:** This tab shows the results of the conversion. It includes a table with 10 entries, each representing a Selenium test case for Java. Each entry has a 'Download' button.
- 5. Downloads:** This tab shows the 'Auto-download batch' toggle, which is currently 'Off'. It also includes a 'Download Full Dataset' button and a filename field set to 'training_data_selenium_java.jsonl'.

Selenium+Python:

The screenshot displays the 'JSONL Training Data Converter for Fine tuning LLM' web application. The interface is divided into two main sections: INPUT and OUTPUT.

INPUT Section:

- 1 SELECT FRAMEWORK & LANGUAGE:** This section allows users to choose a framework and language. The 'Selenium' framework is selected for 'Python' language. Other options include Selenium for Java and C#, and Playwright for Java, TypeScript, and C#.
- 2 PROMPT CONFIGURATION:** Currently set to 'DEFAULT'.
- 3 ADD TRAINING DATA:** This section includes a '+ Single Entry' button and a 'Batch Upload' button. A note states: 'Files need `<code>HTML</code> at minimum. If the framework code marker/section is missing, code is auto-generated from the HTML using the currently selected framework's template. Turn on Auto-download batch in the Downloads tab if you also want the full JSONL saved automatically after processing.'`
- UPLOAD .TXT FILES (10+ RECOMMENDED):** A text area for uploading files.

OUTPUT Section:

- 4 Output:** A tab for reviewing the dataset and export files.
- 5 Downloads (10):** A tab showing download options. The 'Auto-download batch' toggle is currently 'Off'. Below this, a list of 'PER-ENTRY DOWNLOADS' is shown for 'Selenium - Python' with entries 1 through 4. Each entry has a 'Download' button.
- Format Ref:** A tab for format reference.
- DOWNLOAD FULL DATASET:** A section with the filename 'training_data_selenium_python.jsonl' and a 'Download All as JSONL' button.

Playwright+Typescript:
